

Name: _____

Date: _____

Score: / 10

Learning Objectives

- Evaluate and expand/condense logarithms using product, quotient, and power rules
- Solve exponential and logarithmic equations
- Apply the change of base formula
- Model exponential growth, decay, and compound interest

Always check for extraneous solutions in log equations — arguments must be positive. For exponential equations without common bases, take $\ln$ of both sides.

1. Evaluate the logarithm.

$$\log_2 32$$

Answer: _____

2. Expand using logarithm properties.

$$\log_b \left(\frac{x^3 \sqrt{y}}{z^2} \right)$$

Answer: _____

3. Condense into a single logarithm.

$$2\ln x + \ln(x + 1) - \ln 5$$

Answer: _____

4. Solve the exponential equation.

$$3^{x+1} = 81$$

Answer: _____

5. Solve the exponential equation using logarithms.

$$5^x = 20$$

Answer: _____

6. Solve the logarithmic equation.

$$\log_3 (2x - 1) = 4$$

Answer: _____

7. Solve.

$$\ln(x + 3) + \ln(x - 2) = \ln 14$$

Answer: _____

8. Use the change of base formula to evaluate.

$$\log_7 50$$

Answer: _____

9. Compound interest: \$5000 invested at 4% compounded continuously. Find the amount after 10 years.

$$A = Pe^{rt}, \quad P = 5000, \quad r = 0.04, \quad t = 10$$

Answer: _____

10. A population starts at 1000 and doubles every 5 years. Write the exponential model and find the population after 15 years.

$$P(t) = 1000 \cdot 2^{t/5}$$

Answer: _____

Problems 2–3: expand vs condense — students confuse these directions. Problem 7 (log equation): extraneous root $x = -5$ must be rejected. Problems 9–10: applied context.

Solutions

1. Evaluate the logarithm.

$$\log_2 32$$

$$\rightarrow \log_2 32 = x \text{ means } 2^x = 32 = 2^5.$$

$$\rightarrow \text{Answer: } 5.$$

Answer: 5

2. Expand using logarithm properties.

$$\log_b \left(\frac{x^3 \sqrt{y}}{z^2} \right)$$

$$\rightarrow \log(A/B) = \log A - \log B. \log(AB) = \log A + \log B. \log(A^n) = n \log A.$$

$$\rightarrow = \log x^3 + \log y^{1/2} - \log z^2 = 3 \log x + \frac{1}{2} \log y - 2 \log z.$$

Answer: $3 \log_b x + \frac{1}{2} \log_b y - 2 \log_b z$

3. Condense into a single logarithm.

$$2 \ln x + \ln(x+1) - \ln 5$$

$$\rightarrow 2 \ln x = \ln x^2. \text{ Combine using product/quotient rules.}$$

$$\rightarrow \ln x^2 + \ln(x+1) - \ln 5 = \ln[x^2(x+1)/5].$$

Answer: $\ln \left(\frac{x^2(x+1)}{5} \right)$

4. Solve the exponential equation.

$$3^{x+1} = 81$$

$$\rightarrow 81 = 3^4. 3^{x+1} = 3^4 \rightarrow x+1=4 \rightarrow x=3.$$

Answer: $x = 3$

5. Solve the exponential equation using logarithms.

$$5^x = 20$$

$$\rightarrow \text{Take } \ln \text{ of both sides: } x \ln 5 = \ln 20.$$

$$\rightarrow x = \ln 20 / \ln 5 = \log_5 20 \approx 1.861.$$

Answer: $x = \frac{\ln 20}{\ln 5} \approx 1.861$

6. Solve the logarithmic equation.

$$\log_3(2x - 1) = 4$$

→ Convert to exponential: $3^{\blacksquare} = 2x - 1$.

→ $81 = 2x - 1 \rightarrow 2x = 82 \rightarrow x = 41$.

Answer: $x = 41$

7. Solve.

$$\ln(x + 3) + \ln(x - 2) = \ln 14$$

→ $\ln[(x+3)(x-2)] = \ln 14 \rightarrow (x+3)(x-2) = 14$.

→ $x^2 + x - 6 = 14 \rightarrow x^2 + x - 20 = 0 \rightarrow (x+5)(x-4) = 0$.

→ $x = 4$ (reject $x = -5$ since $x - 2 = -7 < 0$ makes $\ln$ undefined).

Answer: $x = 4$

8. Use the change of base formula to evaluate.

$$\log_7 50$$

→ Change of base: $\log_{\blacksquare} 50 = \ln 50 / \ln 7 = \log_{10}(50) / \log_{10}(7)$.

→ $\approx 3.912 / 1.946 \approx 2.012$.

Answer: $\frac{\ln 50}{\ln 7} \approx 2.012$

9. Compound interest: \$5000 invested at 4% compounded continuously. Find the amount after 10 years.

$$A = Pe^{rt}, \quad P = 5000, \quad r = 0.04, \quad t = 10$$

→ $A = 5000 \cdot e^{(0.04 \cdot 10)} = 5000 \cdot e^{0.4}$.

→ $e^{0.4} \approx 1.4918$. $A \approx 5000 \cdot 1.4918 \approx \7459 .

Answer: $A = 5000e^{0.4} \approx \7459

10. A population starts at 1000 and doubles every 5 years. Write the exponential model and find the population after 15 years.

$$P(t) = 1000 \cdot 2^{t/5}$$

→ Doubling time 5 yrs → $P(t) = 1000 \cdot 2^{(t/5)}$.

→ $P(15) = 1000 \cdot 2^{(15/5)} = 1000 \cdot 2^3 = 1000 \cdot 8 = 8000$.

Answer: $P(15) = 1000 \cdot 2^3 = 8000$
