Name: _____ Date: _____ Score: / 10

DIRECTIONS

s.

Apply the correct special-case technique: perfect square, difference of squares, or square root

1 Solve (difference of squares):

$$x^2 - 9 = 0$$

Answer: _____

2 Solve by taking square roots:

$$2x^2 = 8$$

Answer: _____

3 Solve (difference of squares):

$$x^2 - 49 = 0$$

Answer: _____

4 Solve (perfect square trinomial):

$$(x + 1)^2 = 0$$

Answer: _____

5 Solve (difference of squares):

$$x^2 - 16 = 0$$

Answer: _____

6 Solve by taking square roots:

$$1x^2 = 16$$

Answer: _____

7 Solve by taking square roots:

$$2x^2 = 50$$

Answer: _____

8 Solve (perfect square trinomial):

$$(x + 2)^2 = 0$$

Answer: _____

9 Solve (difference of squares):

$$x^2 - 25 = 0$$

Answer: _____

10 Solve (perfect square trinomial):

$$(x + 4)^2 = 0$$

Answer: _____

Math is hard. So we made it human.

Algebra: Special Cases of Quadratic Equations • Numberbender

N

TEACHER NOTES Difference of squares: $a^2 - b^2 = (a+b)(a-b)$. Perfect square: $(a \pm b)^2 = a^2 \pm 2ab + b^2$.

1 Solve (difference of squares):

$$= x = \pm 3$$

$$x^2 - 9 = 0$$

2 Solve by taking square roots:

$$= x = \pm 2$$

$$2x^2 = 8$$

3 Solve (difference of squares):

$$= x = \pm 7$$

$$x^2 - 49 = 0$$

4 Solve (perfect square trinomial):

$$= x = -1 \text{ (double root)}$$

$$(x + 1)^2 = 0$$

5 Solve (difference of squares):

$$= x = \pm 4$$

$$x^2 - 16 = 0$$

6 Solve by taking square roots:

$$= x = \pm 4$$

$$1x^2 = 16$$

7 Solve by taking square roots:

$$= x = \pm 5$$

$$2x^2 = 50$$

8 Solve (perfect square trinomial):

$$= x = -2 \text{ (double root)}$$

$$(x + 2)^2 = 0$$

9 Solve (difference of squares):

$$= x = \pm 5$$

$$x^2 - 25 = 0$$

10 Solve (perfect square trinomial):

$$= x = -4 \text{ (double root)}$$

$$(x + 4)^2 = 0$$
