Geometry: Similarity in Right Triangles & Geometric Mean

Practice Worksheet • numberbender.com

Name: _____ Date: _____ Score: / 10

DIRECTIONS *Solve each problem using the altitude of a right triangle theorem and geometric mean. Show all work.*

1 Find the geometric mean of 4 and 9:

$$\frac{4}{x} = \frac{x}{9}$$

Answer: _____

2 Find the geometric mean of 5 and 20:

$$\frac{5}{x} = \frac{x}{20}$$

Answer: _____

3 Identify all 3 similar triangles:

$\triangle XYZ$ with altitude YW to hypotenuse XZ

Answer: _____

4 Find the geometric mean of 3 and 27:

$$\frac{3}{x} = \frac{x}{27}$$

Answer: _____

5 Find the altitude h given the segments:

Hypotenuse segments: 4 and 9, $\frac{4}{h} = \frac{h}{9}$

Answer: _____

6 Find leg a using the corollary:

Whole hypotenuse = 13, near segment = 4, $\frac{4}{a} = \frac{a}{13}$

Answer: _____

7 Find the altitude h given the segments:

Hypotenuse segments: 6 and 10, $h = \sqrt{6 \cdot 10}$

Answer: _____

8 Find x using triangle similarity:

$\triangle ABC \sim \triangle ADB$, $\frac{AD}{AB} = \frac{AB}{AC}$, $AD = 5$, $AC = 20$

Answer: _____

9 Find both legs given the segments:

Segments on hypotenuse: $p = 3$, $q = 12$; find legs a and b

Answer: _____

10 Find x, y, and h in the right triangle:

$\triangle ABC$, altitude to hypotenuse, $AD = 8$, $DC = 2$, find h, AB, BC

Answer: _____

Answer Key & Solutions

Geometry: Similarity in Right Triangles & Geometric Mean • Numberbender

TEACHER NOTES

Emphasize that when an altitude is drawn to the hypotenuse of a right triangle, it creates two smaller triangles that are each similar to the original and to each other (AA Similarity). Remind students that the geometric mean relationship comes directly from setting up proportions between corresponding sides of similar triangles.

1 Find the geometric mean of 4 and 9:

$\frac{4}{x} = \frac{x}{9}$

= $x = 6$

Cross-multiply to get $x^2 = 36$, then take the square root to get $x = 6$.

2 Find the geometric mean of 5 and 20:

$\frac{5}{x} = \frac{x}{20}$

= $x = 10$

Cross-multiply to get $x^2 = 100$, then take the square root to get $x = 10$.

3 Identify all 3 similar triangles:

$\triangle XYZ$ with altitude YW to hypotenuse XZ

= $\triangle XYZ \sim \triangle XWY \sim \triangle YWZ$

By the Altitude of a Right Triangle Theorem, the altitude to the hypotenuse creates two sub-triangles each similar to the original and to each other.

4 Find the geometric mean of 3 and 27:

$\frac{3}{x} = \frac{x}{27}$

= $x = 9$

Cross-multiply to get $x^2 = 81$, then take the square root to get $x = 9$.

5 Find the altitude h given the segments:

Hypotenuse segments: 4 and 9, $\frac{4}{h} = \frac{h}{9}$

= $h = 6$

By the geometric mean (altitude) corollary, $h^2 = 4 \cdot 9 = 36$, so $h = 6$.

6 Find leg a using the corollary:

Whole hypotenuse = 13, near segment = 4, $\frac{4}{a} = \frac{a}{13}$

= $a = \sqrt{52} \approx 7.21$

By the geometric mean (leg) corollary, $a^2 = 4 \cdot 13 = 52$, so $a = \sqrt{52} = 2\sqrt{13} \approx 7.21$.

7 Find the altitude h given the segments:

Hypotenuse segments: 6 and 10, $h = \sqrt{6 \cdot 10}$

= $h = \sqrt{60} \approx 7.75$

Using the altitude corollary, $h^2 = 6 \cdot 10 = 60$, so $h = \sqrt{60} = 2\sqrt{15} \approx 7.75$.

8 Find x using triangle similarity:

$\triangle ABC \sim \triangle ADB$, $\frac{AD}{AB} = \frac{AB}{AC}$, $AD = 5$, $AC = 20$

= $AB = 10$

Set up $AB^2 = AD \cdot AC = 5 \cdot 20 = 100$, so $AB = 10$.

9 Find both legs given the segments:

Segments on hypotenuse: $p = 3$, $q = 12$; find legs a and b

= $a = 6$, $b = \sqrt{180} = 6\sqrt{5} \approx 13.42$

Using the leg corollary: $a^2 = p(p+q) = 3 \cdot 15 = 45$ so $a = 3\sqrt{5} \approx 6.71$, and $b^2 = q(p+q) = 12 \cdot 15 = 180$ so $b = 6\sqrt{5} \approx 13.42$.

10 Find x, y, and h in the right triangle:

$\triangle ABC$, altitude to hypotenuse, $AD = 8$, $DC = 2$, find h, AB, BC

= $h = 4$, $AB = 4\sqrt{5}$, $BC = 2\sqrt{5}$

Hypotenuse $AC = 8 + 2 = 10$. Altitude $h^2 = 8 \cdot 2 = 16$, $h = 4$. Leg $AB^2 = 8 \cdot 10 = 80$, $AB = 4\sqrt{5} \approx 8.94$. Leg $BC^2 = 2 \cdot 10 = 20$, $BC = 2\sqrt{5} \approx 4.47$.
