

# L'Hôpital's Rule

Numberbender | WORKSHEET

Name: \_\_\_\_\_ Date: \_\_\_\_\_ Score: \_\_\_\_\_

Apply L'Hôpital's Rule where applicable. Show all work.

## CALCULUS I Worksheet #47

|                   |                                                                                                                                                                                                                               |
|-------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| L'Hôpital's Rule: | Suppose that $f(a)=g(a)=0$ , that $f$ & $g$ are differentiable on an open interval containing $a$ , and that $g'(x) \neq 0$ on ; then $\lim_{x \rightarrow a} \frac{f(x)}{g(x)} = \lim_{x \rightarrow a} \frac{f'(x)}{g'(x)}$ |
| Examples:         | $\lim_{x \rightarrow 2} \frac{x^2 - 4}{x - 2} = \frac{0}{0} \Rightarrow$ Use L'Hopital's Rule - Take derivative of numerator and denominator $\Rightarrow$<br>$\lim_{x \rightarrow 2} \frac{2x}{1} = \boxed{4}$               |
|                   | $\lim_{x \rightarrow 1} \frac{x-1}{\sqrt{x}-1} = \frac{0}{0} \Rightarrow$ Use L'Hopitals: $\lim_{x \rightarrow 1} \frac{1}{\frac{1}{2\sqrt{x}}} = \lim_{x \rightarrow 1} \frac{2\sqrt{x}}{1} = \boxed{2}$                     |
|                   | $\lim_{x \rightarrow 2} \frac{x^2 - 4}{x + 2} = \frac{0}{4} = \boxed{0} \Rightarrow$ You cannot use L'Hopital's Rule on this problem! Why??                                                                                   |

### Homework:

|                                                                                                                                                             |                                                                                               |    |                                                                     |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------|----|---------------------------------------------------------------------|
| 1                                                                                                                                                           | $\lim_{x \rightarrow 2} \frac{x^3 - 8}{x^2 - 4}$                                              | 2  | $\lim_{x \rightarrow 0} \frac{\sin 5x}{x}$                          |
| 3                                                                                                                                                           | $\lim_{x \rightarrow 2} \frac{\sqrt{2+x}-2}{x-2}$                                             | 4  | $\lim_{x \rightarrow 1} \frac{\sqrt[3]{x}-1}{x-1}$                  |
| 5                                                                                                                                                           | $\lim_{x \rightarrow 2} \frac{x^2 - 4x + 4}{x^3 - 12x + 16}$                                  | 6  | $\lim_{x \rightarrow \frac{\pi}{2}} \frac{1 - \sin x}{1 + \cos 2x}$ |
| 7                                                                                                                                                           | $\lim_{x \rightarrow 1} \frac{x^3 - 1}{4x^3 - x - 3}$                                         | 8  | $\lim_{x \rightarrow 3} \frac{x-4}{x-2}$                            |
| For 9-12: $\int_{-1}^0 f(x)dx = -2$ $\int_0^1 f(x)dx = 1$ $\int_{-1}^0 g(x)dx = 3$ $\int_{-1}^1 g(x)dx = 7$ $\int_{-1}^1 h(x)dx = 5$ $\int_0^1 h(x)dx = 11$ |                                                                                               |    |                                                                     |
| 9                                                                                                                                                           | $\int_{-1}^1 f(x)dx$                                                                          | 10 | $\int_{-1}^0 h(x)dx$                                                |
| 11                                                                                                                                                          | $\int_{-1}^{-1} g(x)dx$                                                                       | 12 | $3 \int_{-1}^0 g(x)dx - 2 \int_{-1}^0 h(x)dx$                       |
| 13                                                                                                                                                          | If $f(x) = x^2 \tan^{-1} x$ , then $f'(1) = ??$                                               | 14 | Find the area between the curve $y^2 = 4x$ and the line $y=x$ .     |
| 15                                                                                                                                                          | Find the area of the region enclosed by $y = e^x$ , $y = \frac{1}{x}$ , $x = 1$ and $x = 2$ . | 16 | $\int_0^1 x(5-x^2)dx$                                               |
| 17                                                                                                                                                          | $\int_1^2 2^x dx$                                                                             | 18 | $\sum_{j=-3}^3 (2j+1) =$                                            |
